Quiz 1: Introduction to Data Science

LATEST SUBMISSION GRADE

87.5%

1. Which of the following statements that are true about data science? Select all that apply.

1 / 1 point

☐ Data science refers only to problems where the data is too big for a single computer

☒ Data science is more relevant today because we have more data available

✓ Correct

☒ Data science is used to help inform critical decisions

✓ Correct

☒ An important part of data science is the ability to tell a compelling story from the data

✓ Correct

☐ Only programmers and statisticians can do data science

2. Which is NOT a typical question to ask when doing data science?

1 / 1 point

☐ What will happen next?

☐ What happened?

☐ What should be done about it?

☐ Why did this happen?

☒ Who will fix it?

✓ **Correct**

Correct. Data science can help you answer the other questions listed, but usually not tell you who should fix a problem

3. Which of the following statements is true regarding the data science workflow.

0 / 1 point

- ☐ During the data analysis state, you need to set your goals after first visualizing the data.
- ☐ Visualizations like histograms and scatter plots are not useful when trying to identify potential relationships between variables.
- ☐ Keeping missing, incomplete, or duplicate data unmodified will generate better results.
- ☐ Once you are confident in your qualitative results, you can share your finding through visualizations, presentations, and reports.
- ☒ Machine Learning often works best on the raw data.

! **Incorrect**

It's usually necessary to process the data prior performing machine learning. Deciding how to handle missing data and outliers is important.

4. True/False: The three global tabs available in the MATLAB toolstrip are: Home, Plots, and Editor

1 / 1 point

- ☐ True
- ☒ False

✓ **Correct**

Correct. The three global tabs are Home, Plots, and Apps

5. In the MATLAB environment you create new files using the

1 / 1 point

- ☐ Plots Tab
- ☐ Apps Tab
- ☐ Workspace
- ☒ Home Tab

☐ None of the above

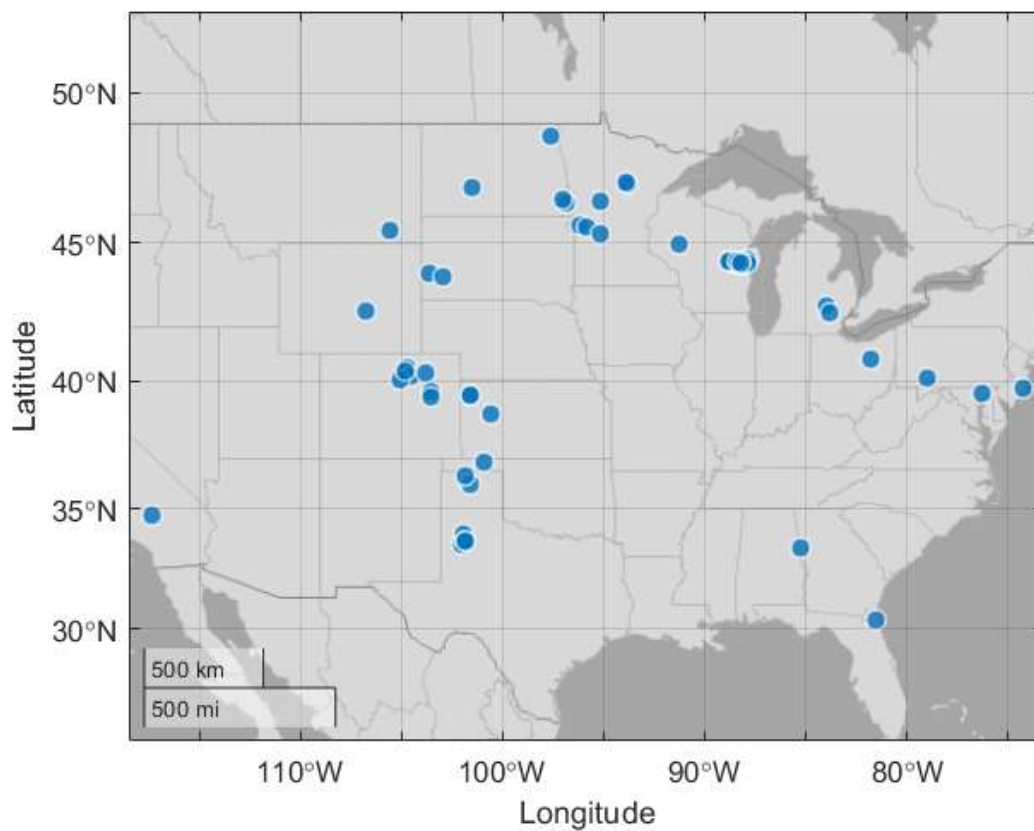

✓ **Correct**

Correct. The Home Tab includes options for creating new files

6. The following three questions require you to use the [live script analyzing tornado events in 2013](#) from the reading.

1 / 1 point

Run the script to import the 2013 weather events data. Then, go to the "Plot tornadoes for a given month" section and select November from the drop-down menu. Which figure below is closest to the figure created in the script.

✓ Correct

Correct! Most of these tornadoes happened as part of a large outbreak on November 17th.

7. In the live script analyzing tornado events, run the script and and move to "Part 3: Calculate Group Statistics." What month had the most tornadoes?

1 / 1 point

May

✓ Correct

8. Continuing from the previous question, move to "Total damage by month" and select "sum" from the drop-down menu. Sort the cost table by sum_Total_Damage form largest to smallest. Look at the third most damaging month. What was the cost for that month?

- ☒ \$88,605,000
- ☐ \$102,210,000
- ☐ \$40,211,000

☐ \$353,490,500

Correct

Correct! January was the third most damaging month
